

# **Proportional relief valves**

digital, pilot operated, open loop, subplate or modular mounting

#### RZMO-A, RZMO-AEB, RZMO-AES HZMO-A

Spool type pilot operated digital proportional relief valves for pressure open loop controls, available in subplate or modular mounting.

#### Executions:

- A without integral driver, to be coupled with separated drivers, see section [2]
- AEB with basic integral digital electronic driver, analog reference signals and USB port for software functional parameters setting
- AES with full integral digital electronic driver and fieldbus interface for functional parameters setting, reference signals and real-time diagnostics

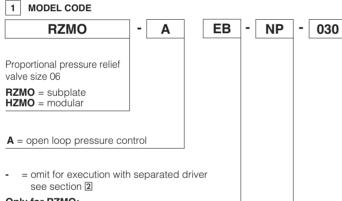

The integral digital electronic driver performs the valve's hydraulic regulation according to the reference signal and assures valve-to-valve interchangeability thanks to the factory presetting

Seals material, see sect. 5, 6

Size: **06** 

\*\*

Max flow: **40 l/min** Max pressure: **350 bar** 

#### Only for RZMO:

**EB** = basic integral driver

**ES** = full integral driver

Fieldbus interfaces - USB port always present (1):

**NP** = Not present

**BP** = PROFIBUS DP

**BC** = CANopen

**EH** = EtherCAT

### Configuration:

030 = regulation on port P, discharge in T (pilot operated version)

- = NBR
PE = FKM
BT = HNBR

Series number

Coil voltage only for A - see sect. 8:

= standard coil for 24V<sub>DC</sub> Atos drivers

= optional coil for 12V<sub>DC</sub> Atos drivers

**18** = optional coil for low current drivers

#### **Electronics options**

only for AEB, AES - see sect. 9:

- I = current reference input 4 ÷ 20 mA
  - (omit for standard voltage reference input 0 ÷ 10 V)
- **Q** = enable signal
  - double power supply, enable, fault and monitor signals - 12 pin connector

#### Max regulated pressure:

**50** = 50 bar

315

**100** = 100 bar **315** = 315 bar **210** = 210 bar **350** = 350 bar

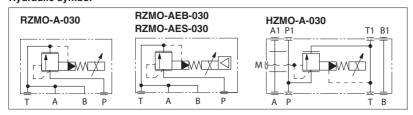

(1) Omit for A execution; AEB available only in version NP; AES available only in version BC, BP, EH

# 3 GENERAL NOTES

RZMO-A\* and HZMO-A proportional valves are CE marked according to the applicable Directives (e.g. Immunity/Emission EMC Directive and Low Voltage Directive).

Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in table F003 and in the installation notes supplied with relevant components.

# 4 FIELDBUS - only for AES

Fieldbus allows the direct communication of the proportional valve with machine control unit for digital reference signal, diagnostics and settings of functional parameters. Analog reference signal remain available on the main connector for quick commissioning and maintenance. For detailed information about fieldbus features and specification see tech table **GS510**.

#### 8 OPTIONS for -A

#### 8.1 Coil voltage

Option /6 optional coil to be used with Atos drivers with power supply 12 Vpc
Option /18 optional coil to be used with electronic drivers not supplied by Atos

# 9 ELECTRONIC OPTIONS - for AEB and AES

Standard driver execution provides on the 7 pin main connector:

Power supply

 24 V<sub>DC</sub> must be appropriately stabilized or rectified and filtered; a 2,5 A fuse time lag is required in series to each driver power supply. Apply at least a 10000 μF/40 V capacitance to single phase rectifiers or a 4700 μF/40 V capacitance to three phase rectifiers

Reference input signal - analog differential input with  $0 \div +10 \text{ Vpc}$  nominal range (pin D, E), proportional to desired valve pressure regulation Monitor output signal - analog output signal proportional to the actual valve's coil current (1V monitor = 1A coil current)

**Note:** a minimum booting time of 500 ms has be considered from the driver energizing with the 24 Vpc power supply before the valve has been ready to operate. During this time the current to the valve coils is switched to zero.

#### 9.1 Option /I

It provides 4 ÷ 20 mA current reference signal, instead of the standard 0÷+10 Vpc.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V or ±20 mA.

It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage

# 9.2 Option /Q

To enable the driver, supply 24 Vpc on pin C referred to pin B: Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to maintain active the communication and the other driver functions when the valve has to be disabled. This condition does not comply with European Norms EN13849-1 (ex EN954-1).

#### 9.3 Option /Z

It provides, on the 12 pin main connector, the following additional features:

#### **Enable Input Signal**

To enable the driver, supply 24 Vpc on pin 3 referred to pin 2: Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to maintain active the communication and the other driver functions when the valve has to be disabled. This condition does not comply with European Norms EN13849-1 (ex EN954-1).

#### Fault Output Signal

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for 4÷20mA input, etc.). Fault presence corresponds to 0 Vpc, normal working corresponds to 24 Vpc (pin 11 referred to pin 2): Fault status is not affected by the Enable input signal

### Power supply for driver's logics and communication

Separate power supply (pin 9,10) allow to cut solenoid power supply (pin 1,2) while maintaining active diagnostics, serial and fieldbus communication. A safety fuse is required in series to each driver power supply: 500 mA fast fuse.

#### 9.4 Possible combined options: /IQ, /IZ

#### 10 PROGRAMMING TOOLS - see tech table GS500

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver. For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus.

The software is available in different versions according to the driver's options:

 E-SW-BASIC
 support:
 NP (USB)
 PS (Serial)
 IR (Infrared)

 E-SW-FIELDBUS
 support:
 BC (CANopen)
 BP (PROFIBUS DP)
 EH (EtherCAT)

 EW (POWERLINK)
 EI (EtherNet/IP)

E-SW-\*/PQ support: valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ)

#### WARNING: drivers USB port is not isolated!

The use of isolator adapter is highly recommended for PC protection (see table  ${f GS500}$ )
