

Pressure Gauge Isolator Valve (PUSH TO READ) GI

Release: Jan 2019

ENGINEERING - 1 of 3

Ref. No. H03542

Description

The Pressure gauge Isolator valve, model **GI** is meant for checking the system pressure to which it is connected, whenever required.

The valve is a spool type, spring off-set, manually operated device.

In normal condition, the valve blocks the pressure port and keeps the pressure gauge connected to the drain. Thus isolating the gauge from system pressure surges and eliminating continuous pressure strain on the gauge.

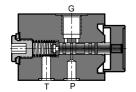

By pushing the actuator knob of the valve, system pressure can be read on the gauge.

The valve is available either for Sub-plate mounting on a sub-plate or back face mounting or with threaded ports.

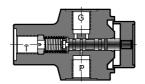

The pressure gauge can either be directly mounted on the valve or can be connected remotely.

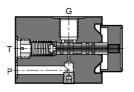

Section

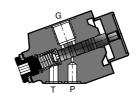

Sub-plate Mounting Model: GIM

Panel mounting Model: GIP

Back face Mounting Model: GIB

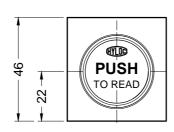

Sub-plate Mounting Model: GIMH

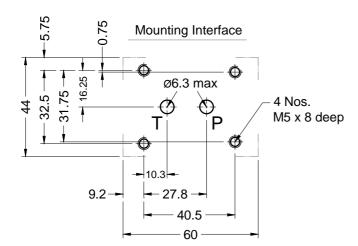

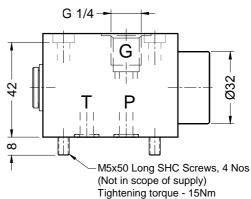

Hydraulic Symbol

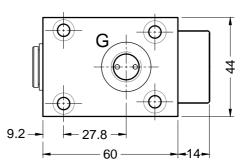

Unit Dimensions

Gauge Isolator Valve, Sub-plate Mounting, Model: GIM

Technical Specifications

Construction ----- Spool type, manually operated, spring off-set.

Mounting ----- Sub-plate mounting / Panel mounting

Mounting position ----- Optional

Flow direction ----- As indicated by hydraulic symbol.

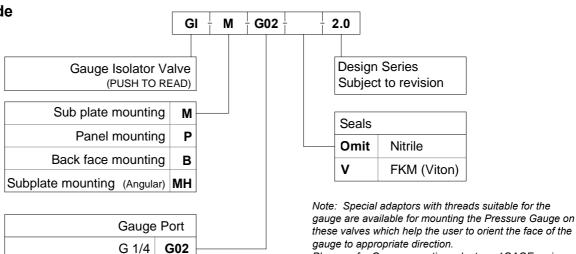

Operating pressure ----- 210 bar.

Hydraulic medium ----- Mineral oil.

Fluid temperature range ----- -10 °C to +80 °C.

Fluid cleanliness requirement ----- As per ISO 4406 20/18/15
